My Process

Vision
You tell me what goals and visions you have for your website. What is your biggest need? What styles do you like?

01

Research
I will analyze your competitors' websites to improve your website's experience.

02

Design
I design a couple different website looks, and you choose which one you like.

03

Code
I will code your chosen design so we can get your website up and running!

About Me

I am a student studying Full Stack Web Development at Weber State University. However, I wasn't always interested in web design. As I took steps to enter college, I changed my major a couple times but wasn't happy with it.

I remembered taking a Web Development class in high school that I found enjoyable, as I was able to manipulate a website's elements through code and use my keen attention to detail to spot any syntax errors. I also liked the variety of possibilites for elements that could form a website.

I promptly changed my major to Web Development and have been enjoying using both my creative and logical sides to create wonderful websites!

I love to design websites, but I also have other interests:

Running

Camping

Sewing

Cooking

Video Games

Webby

My Role: Customizer

Time to Complete: 2 weeks

Sources: Code adapted from this YouTube course

Full Website (opens in new tab)

Description

Webby is a pretend website for a web designer. The main goal of this project was to take a website template and customize it to make it more my own by using SASS to customize Bootstrap's default styles.

The one-page starter project was created from a YouTube tutorial, then I chose custom colors, images, graphics, icons, designed a logo, added real text, and added a couple new sections to the website to make it more complete. The site is responsive, and displays correctly on all screen widths, from mobile to desktop.

One of the struggles I experienced with this project was overriding the default styles created by Bootstrap. After some manipulating of code and experimenting, I was able to overcome this and create a system that allowed me to easily customize the website.

Cardeal

My Role: Designer & Developer

Time to Complete: 2 weeks

Sources: Illustrations from Flaticon, made by Smashicons

Full Website (opens in new tab)

Description

CarDeal is a made-up company that offers to buy your car for cash, with the option to do a trade-in to purchase a vehicle CarDeal owns. One of the main goals was to design a website that is more customized and stands out from other competitor websites, while still providing customers with the information they need.

I was given specific instructions for what content to include in each section, but I chose the colors, fonts, and layout to implement. I also designed a favicon for the website so it has more presence in browser tabs. The site is a one-page website that is responsive and displays pleasing looks on desktop, tablet, and mobile phone screens.

I believe one of the strongest features of this web project is the header/hero section. It is extremely important to have the first thing users see be visually pleasing and quickly summarize what the website is about, and the design I have creates a good first impression while making it clear that this website buys cars.

Design Choices

Color Palette

I chose these along with different shades and tints for the website. The color harmony is split complementary, which makes the buttons and links stand out more because of the way I implemented the colors.

Custom Cards

I customize commonly used elements to match the website theme to help it feel uniform. On the left is the basic card style, and on the right is my custom design for this website. The More Details button adds a paragraph at the bottom using JavaScript.
